NEW PRODUCTS

Flexible workflow definitions with BCS-2® Professional

Intuitive to use, tailored to customer requirements and yet scalable (!)

The completely redesigned BCS-2® scan software „V6" is modular and has an application-oriented user interface. Four options are available:

- BCS-2® Professional for extensive indexing and (post-) processing
- BCS-2® standard for standardized workflows
- BCS-2® Office for the office work
- BCS-2® Express for self-service-areas

To increase the usability, the individual BCS-2® variants including their control elements are precisely matched to the different application areas and functions of the certified scanner models.

Workflows of the BCS-2® Professional version

BCS-2® workflows depict clearly defined business procedures and applications. These are composed of for example job and page index, OCR, meta- and structural data and the transfer to third party system and / or applications which can directly process the data.
BCS-2® Professional users can define workflows themselves or let them be defined by service providers or select from a pool of predefined standard workflows. Typical applications are:

- Collection and Retro digitization
- Delivery to/Supplying presentation systems (MyBib eL®/Goobi)
- Mass digitization
- Catalogue enrichment
- National, international and campus-internal document delivery
- Delivery to/ Supplying e-learning platforms

Features of the BCS-2® Professional version

The new professional version with its job administration provides special functions for service providers and the experts in libraries:

- Image Plus: Automatic deskew + crop + rotation in one function
- Automatic segmentation, Multicrop, production of single images
- Use of different OCR engines (ABBYY and Tesseract)
- Zonal text recognition

Illustration 1: BCS-2®: Multicrop

Illustration 2: BCS-2®: Detect segments
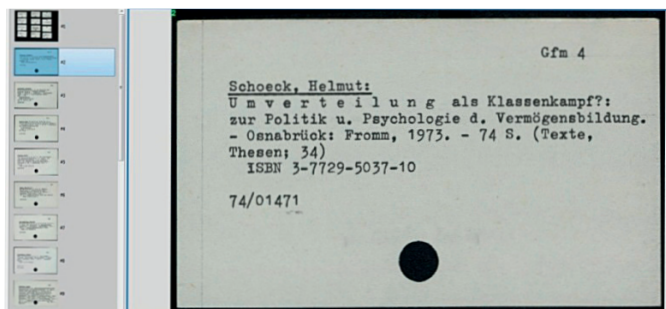

Illustration 3: BCS-2®: Insert detected segments as new images

- Freely configurable and multilingual interface
- Clear display of all jobs with job information and image preview
- Flexible job and page indexing to create meta- and structural data
- Connection to third party systems like MyBib eDoc®, MyBib eL®, Goobi, VZG amongst others
- runs on Windows 7/8 and already tested on Windows 10 beta
- Stable for 24/7 use

BCS-2® short description

BCS-2® is a software for digitizing books, magazines, cards and other document types. The post-processing and electronic publishing of images can be done immediately after scanning (even at external workstations).

Depending on the configuration the results of the scanning processes are seamlessly integrated into the workflow system MyBib eDoc® or in the electronic reading room MyBib eL®. BCS-2® controls to different types of scanners, copiers and digital cameras.
